## What is PowerSync?

» PowerSync was born from an industry need for a simplified, contractor-friendly installation without compromising the dimming quality.

» PowerSync supports industry standard protocols: 0 to 10 V and DMX/RDM.

» High-resolution dimming to 0.1%.

» Installation of PowerSync requires only industry standard wiring methods and materials.

» PowerSync uses a single, extra conductor to carry data — less copper and fewer connections versus other manufacturers using traditional control methods.

» Consistent dimming performance, wiring, and installation across all PowerSync luminaires.
